DOUBLE DEEP RACKING

Double Deep Racking stores two pallets deep, or four pallets deep in a double entry rack: Double entry racks reduce the aisle to rack ratio but also reduces pallet selectivity, increasing storage density. 50% immediate pallet access provides reasonable stock rotation on a FILO (First In Last Out) basis and makes good use of all available locations. This system is best used when each SKU has several pallets.

ADVANTAGES

- An increase in pallet racking capacity by as much as 10-15% depending on warehouse racking layout and size. Up to 40% more storage capacity than selective pallet racking.
- Eliminates unneeded aisles and releases storage space, increasing floor space utilization by 55%.
- Offers 50% selectivity, i.e., immediate accessibility to 50% SKUs.
- Same low cost per pallet as less expensive than the two deep Push back racking system with same storage density.
- Easily relocated and easily converted to/from single deep system.
- Variety of frames profiles and adjustable beam levels to choose from for re-configuring the pallet size to fit changing requirements

LONG SPAN SHELVING

Long, uninterrupted spans also make this ideal for a wide range of big and bulky items. Long span system incorporates a wide range of beams and frames, making it easy to customize to meet your precise needs. Open, mesh clad, medium and long span bays can be combined in the same unit for efficient storage of a wide range of stock items. We also provide a number of high-performance accessories to extend the versatility of the long span system.

ADVANTAGES

-Quick and easy installation with no special tools and no special training saves you time and money

Shelves are easily adjusted to your needs as stock patterns change -
Designed for safety-all components comply with European guidelines for safe storage
